

### Metadata Concerning Tables (Example)

**NOTE:** List all tables from the logical data model. The entries are sorted alphabetically by table name. (# = Primary Key; + = Required)

Table Name	Description	Attributes
EMPLOYEE	Someone who works for The Hungry Heifer.	= employee# + SSN + e. First name + e. Last name + e. Address + e. City + e. State + e. ZIP
PRODUCT	An item that The Hungry Heifer offers for sale.	= product# + description + price

### Metadata Concerning Attributes (Example)

**NOTE:** You should have an entry in the table for each of the attributes in your logical data model. The element items are listed in alphabetical order. Be sure to list data types that can be used in MySQL.

Attribute Name	Alias	Description	Data Type	Length	Decimal Places
Description	None	The product description	Alphanumeric	30	NA
e. address	None	The street address where the employee lives	Alphanumeric	45	NA
e. city	None	The city where the employee lives	Alphanumeric	20	NA
e. first name	None	The employee's first name	Alphanumeric	20	NA
e. last name	None	The employee's last name	Alphanumeric	20	NA
e. state	None	The state where the employee lives	Alphanumeric	2	NA
e. ZIP	None	The zip code where the employee lives	Alphanumeric	9	NA
Employee#	Employee ID	The unique identifier for an employee	Numeric	NA	NA
Price	None	The current selling price of the product	Currency	NA	2
Product#	None	The unique identifier for a product	Alphanumeric	NA	NA
